

Flexographic printing machine

Maklaus printing machine mod. **PMP-600** is designed to print upto **4 colours**, with both solvent or water based ink, and provides direct processing in a final product of the film, in a single step.

PMP is **100% Atex** and printing speed is upto **400 m/min**.

PMP 600 is a very easy to use and maintain machine, designed to work with rolls of **600 mm width**, with different core diameters upto **100 kg**.

This machine allows to print and rewind stretch and pre-stretch film and obtain directly the final products like hand rolls and machine rolls or to go back to mother roll, if necessary.

PMP-600 is designed with a magnetic coupling system of cliché on the roller, which allows you to change the print quickly and safely, without requiring further calibrations.

The printing machine is easy to operate and can be managed by a single technician, even if this operator is not specialized: a further advantage in the evaluation of the required time for the amortization.

PMP is also available in 1200 mm material width version.

PMP-600

Products

Printed
Stretch, Pre-Stretch & Cling film

Mother rolls
Machine rolls
Hand rolls
Mini rolls
